

MS834: Business Information Systems

Group Assignment Descriptor

The group assignment is worth 60% of the total marks for this class. You will be submitting the assignment as a group. Please choose ONE of the following topics:

1. Critically evaluate the underlying architecture of an Enterprise Resource Planning (ERP) system with which you are familiar. Compare this to recent technological developments (e.g., SAP HANA or Blockchain). Finally, using appropriate evidence, comment on which industries might be disrupted by these emerging technologies, and where traditional technologies are likely to remain prevalent.
2. Critically discuss ERP practices in Small and Medium-sized Enterprises (SMEs) compared to large organisations. Your assignment should focus on how technological and economic factors influenced the adoption and roll-out of ERP.
3. Critically discuss current ERP practices in the service industry versus the manufacturing industry. Focus on how technological and economic decisions shaped the adoption and implementation of ERP systems.
4. Choose a company of your choice and analyse the changing dynamics of its brick-and-mortar stores alongside its web presence. Based on your analysis, develop an IS/ICT strategy to enhance integration. In your discussion, include the business's competitive factors, value proposition, and the business value chain model.

Note: The report should be 3,000 words long and fully referenced. The reference list does not count towards the word limit. Submissions that are significantly over or under the limit will be penalised. The word count must be stated on the front page of the assignment.
